Estimator Job Description

Job Summary

An estimator is responsible for reviewing customer drawings/prints for quotation. Upon gaining an understanding of the assembly, the estimator works with the purchasing department to gather costs of material and begins evaluating the labor involved in the assembly. Once the prints are broken down into manufacturing steps and proper costs are obtained, the estimator quotes the assembly. This position offers great variety in day-to-day workload in that the types of assemblies vary, keeping every day exciting and challenging.

Responsibilities

- Breaking down assemblies from prints into manufacturing steps and costed BOMs
- Reverse engineering of assembly samples
- Creating prints for the manufacturing floor
- Working with multiple departments in a collaborative effort to understand and secure business
- Adhere to company procedures and standards to assure quality objectives are met
- Ability to work in a fast-paced environment
- Processing ECN's to address revision changes

Requirements

- Understanding of reading a blueprint and electrical schematics
- Knowledge of the interconnect industry is a plus
- Electrical and/or Mechanical Engineering background a plus
